Darsan Ghosh

Game Developer | Software Developer

SUMMARY

B.Tech Computer Science student and developer known online as XpolioN. Focused on game development, graphics, rendering, game engines, low-level programming, and performance-oriented software. Builds games, developer tools, and systems

EXPERIENCE

Game Developer | 2025

Next G Solution

- Developed and delivered games using Godot and GDScript.
- Implemented gameplay mechanics, game systems, collision handling, progression, and game logic.
- Worked across development, testing, debugging, iteration, and release.

Gameplay Programmer | 2025

100 Devs 1 Game

- Worked as part of a four-person game development team.
- Implemented gameplay mechanics and interactive systems.
- Collaborated with other contributors to integrate gameplay and other project components.

PROJECTS

LiDimension | Completed

- 2.5D LiDAR data processing and visualization project.
- Processes and analyzes LiDAR point-cloud data.
- Achieved approximately 98% lower memory usage compared to a conventional full 3D representation.
- Maintains practical processing times without sacrificing significant performance.
- Uses Python, NumPy, SciPy, and Open3D.
- Focuses on spatial data processing and computational geometry.
- Live Project: lidimension.netlify.app

Mental Record | Released

- Game developed as part of a four-person team.
- Implemented core gameplay mechanics.
- Developed gameplay systems using Godot and GDScript.
- Collaborated with other contributors on the project.
- itch.io: 100devs.itch.io/mental-record

OscilloRun | Released

- Minimalist Android endless runner developed in Godot.
- Developed and delivered the game end-to-end.
- Implemented movement, direction switching, obstacles, collision detection, survival mechanics, and progressive difficulty.
- Published in January 2025.
- itch.io: xpolion.itch.io/oscillorun

ZION | Completed

- Software project involving attack simulation, backend development, and API integration.
- Worked on attack simulation and backend integration.
- Built backend functionality using Python and FastAPI.

Velo | In Development

- Lightweight command-execution engine focused on low-level systems programming and performance.
- Solo-developed using Rust.
- Uses Win32, Direct2D, and DirectWrite.
- Focused on low memory usage, fast startup, custom runtime design, and system-level programming.
- GitHub: github.com/XpolioN2005/velo

SKILLS

Game Development
Godot, Unity, Pygame, GDevelop 5

Programming Languages
C, C++, C#, Python, GDScript, Rust, Java, Lua, JavaScript

Graphics & Rendering
OpenGL, GLSL, GDShader

Machine Learning & Data Science
scikit-learn, OpenCV, NumPy, Pandas, Matplotlib

Web & App Development
React, Svelte, Astro, Flutter

3D & Digital Content
Blender, Blockbench

Developer Tools
Git, GitHub, VS Code

EDUCATION

Bachelor of Technology in Computer Science and Engineering

2024 - Present

Techno India University, West Bengal

ACHIEVEMENTS

- Contributed to the open-source Godot Engine.
